
24 March 2008

TO: Oxicom Customers

SUBJECT: PeerQC Participation Thank You

PeerQC

During 2007, we conducted an “Oxicom PeerQC” data collection project via the PeerQC website which allowed Oxicom customers to compare their liquid control data measurements against other Oxicom customers across the nation. This project primarily allowed us to validate our Oxicom liquid control data across many Oxicom customers.

Effective 01 April 2008, the PeerQC data collection website will terminate since we believe with the amount of data collected provides us a sufficient sample size to determine the effectiveness and efficiency of the Oxicom liquid controls across all our Oxicom customers. If your organization would like a copy of the data collected, please contact us.

Thank You Gift

We had approximately 20 (see below listing) of our 350 total Oxicom customers involved with this PeerQC project. For those of you who participated, we will be sending your organization a complimentary pack of 300 Oxicom cuvettes and 1 box of liquid controls to say Thank You!

Liquid Controls

As the manufacturer of the Oxicom; we require Oxicom customers to use the Oxicom liquid controls as a mandatory quality functional check. Oxicom customers should be familiar with the following references which are available via our website:

- Oxicom Instruction Manual
- Liquid Controls Requirement Letter
- Liquid Controls Instruction Manual

Thank you all for your business, we sincerely appreciate and value you as our customer.
